

NEW CRITICAL VULNERABILITY ADVISORY: CVE-2026-17276

Summary

CVE-2026-17276 is a newly disclosed Critical vulnerability. It is not yet on CISA's actively-exploited list; treat it as proactive patching before it is weaponised. IBM i 7.6, 7.5, 7.4, and 7.3 could allow a remote authenticated attacker to escalate privileges due to improper authorization in the handling of high-authority threads.

What we know

- **CVE:** CVE-2026-17276
- **Status:** Newly disclosed, not yet known-exploited (not on CISA KEV)
- **Severity:** CVSS 9.6 Critical, Network-exploitable, no user interaction (CVSS:3.1/AV:N/AC:L/PR:L/UI:N/S:C/C:H/I:H/A:N)
- **Exploitation likelihood (EPSS):** 0%

Recommended action

Patch as a fix becomes available, prioritised by the exposure and EPSS above. Until then, limit network exposure of the affected service and tighten access until patched. This does not yet trigger CRA 24-hour reporting, which requires active exploitation, but patching ahead of exploitation is the whole point.
